

MARKET CATEGORY

QR Code Authentication & Mobile Threat Defense

BACK-OFFICE AI TERM

QR Security / Mobile Threat Defense / Phishing-Resistant Authentication

CATEGORY HOOK

QR code phishing attacks surged over 400% in 2023 and are now the fastest-growing vector for credential theft and malware delivery. Every scan is a trust decision made in under a second. The companies building QR security infrastructure need names that communicate protection at the speed of a phone camera.

PRIMARY BUYER

Cybersecurity firms, mobile device management vendors, enterprise IT security teams, financial institutions, and event/venue operators managing high-volume scanning environments.

IMAGINE SCENARIOS

QRarmor.com An enterprise QR firewall that intercepts and validates every code before it reaches a device — security infrastructure that acts like armor, not an alarm.

QRwatchdog.com A real-time QR threat intelligence platform that flags malicious codes across networks — the 24/7 sentinel for mobile attack surfaces.

QRintegrity.com A code-signing and authentication service for enterprises issuing QR codes — proving the code is genuine before it's scanned.

QRtruster.com A consumer-facing QR verification app that tells users in one tap whether a code is safe — trust infrastructure for the general public.
