

MARKET CATEGORY

Digital Identity, Provenance & Unique Identifier Infrastructure

BACK-OFFICE AI TERM

Digital Provenance / Unique Identifier Infrastructure / AI Asset Authentication

CATEGORY HOOK

Every AI-generated asset — every document, image, decision, agent action — needs a unique, verifiable identifier to be trusted at scale. GUIDs (Globally Unique Identifiers) are the invisible backbone of digital provenance. As AI floods the world with synthetic content, the infrastructure to track, verify, and authenticate it becomes critical IP.

PRIMARY BUYER

Digital asset management companies, blockchain and provenance technology firms, enterprise data governance teams, and AI content authentication platforms.

IMAGINE SCENARIOS

guid.world A global registry and standards body for AI-generated content identifiers — the ICANN of synthetic media provenance.

guid.club An exclusive community and professional network for engineers and architects building identifier and provenance systems — where the infrastructure builders convene.
